

ORO **New Millennium Sleep System**

Turns your *Dreams* into Reality

The *ORO* Sleep System is the **First Automatically Adjustable Bed in the World** which lets you programme your most comfortable sleep positions. This means that the bed will actually sense the change of position from the one that you were sleeping in and **ADJUST the base of the bed automatically throughout the night whilst you are asleep**, to the best and most comfortable position.

When the *ORO* Bed is combined with our second invention, the 'Mattress' with its unique 'Pressure Relief Comfort Recess' we have created what the press is hailing as '*The First Intelligent Bed of the New Millennium.*'

The other patented and first product is the **ORO Superlux Foam Mattress**

Patents granted

A mattress with recess which is of a sandwich configuration, the top section being made of high density Visco-elastic slow recovery foam which is sensitive to body weight and temperature. However, at the heart of the mattress is what all clinicians agree to be the main reason for *ORO's* remarkable success – its unique **Pressure Relief Comfort Recess**.

Exclusive "Comfort recess" – only with *ORO*

Neck and back are in straight natural posture

Automatic adjustment sensor

Unique "Memory Mattress"

Pressure Relief Comfort Recess

This recess ensures that the sleeper is held in the most ergonomically efficient pressure free position, with the spine and neck held in a natural straight line from head to hips. It provides an invaluable aid to circulation and creates the opportunity for long, undisturbed health giving sleep, and at the same time eliminating stiff necks, tense shoulders or aching backs.

At the 31st International Exhibition of Inventions in Geneva (April 2003), *ORO* was awarded a Gold Medal for Design and Innovation for the **ORO Sleep System.**
